

PUPP® Lining

PUPP Lining

Innovative and high-quality coating system!

We are known for our innovative solutions in high-quality thermoplastics and thermosetting plastics. This makes us truly proud. It's a shame that some of our clients are unaware of our versatility.

Besides the range of self-developed services and products, we also offer customized solutions. A lot of our accomplished products are developed as customized solutions for our clients.

The coating system **PUPP Lining** is also developed by RKT. This system was commissioned by the Nederlandse Gasunie to extend field coating systems for drillings and pressings. PUPP Lining is equivalent to the quality of plant coating.

Because of the use of Polyurethane, the coating system PUPP Lining, type PP and PE, is corrosion resistant. The coating can be applied at any location because of the self-developed mobile workshop.
